Summary :

The **CRM Application for The Chai Shop & Co** is designed to manage customer relationships, sales activities, and business operations using the Salesforce platform. The project focuses on improving customer engagement, tracking orders, managing leads, and maintaining customer data efficiently.

By implementing Salesforce CRM, The Chai Shop & Co can automate many manual processes such as customer record management, order tracking, sales monitoring, and communication management. The system allows employees to access customer information quickly, improve customer service, and make better business decisions through data insights.

The project demonstrates how Salesforce can be used to build a scalable and cloud-based CRM solution for small and medium businesses. It improves productivity, reduces manual errors, and provides a centralized platform for managing customer relationships.

INTRODUCTION

Customer Relationship Management (CRM) systems play a crucial role in modern businesses by helping organizations manage customer data, track interactions, and improve customer satisfaction. As businesses grow, managing customer information manually becomes difficult and inefficient.

The Chai Shop & Co is a growing business that needs an organized system to handle customer data, orders, and sales activities. Implementing a CRM system using Salesforce helps the company streamline operations, manage customer relationships effectively, and increase sales performance.

This project focuses on developing a CRM application using Salesforce to support customer management, lead tracking, and sales monitoring for The Chai Shop & Co.

1.1 Project Overview :

The **CRM Application for The Chai Shop & Co** is built on the Salesforce platform to manage customer data, sales processes, and service activities. The system provides a centralized platform where employees can store, access, and update customer information.

Purpose :

The main purpose of this project is to develop a Salesforce-based CRM application that helps The Chai Shop & Co manage customer relationships effectively. The objectives of the system include:

- **To maintain a centralized database of customer information**
- **To track leads and sales opportunities**
- **To improve customer service and communication**
- **To automate business processes using Salesforce tools**
- **To generate reports and insights for business decision making**

By implementing this CRM system, The Chai Shop & Co can improve customer satisfaction, increase sales efficiency, and enhance overall business productivity.

2. IDEATION PHASE

The application includes features such as:

- **Customer information management**
- **Lead and opportunity tracking**
- **Sales management**
- **Order tracking**
- **Customer communication records**
- **Reporting and analytics**

Using Salesforce's cloud-based environment, the CRM system improves operational efficiency and enhances customer service by providing quick access to relevant information.

2.1 Problem Statement(Customer Problem Statement Template)

2.2 Empathy Map Canvas Target Users:

- The system should allow users to create and manage customer records.
- The system should allow tracking of leads and opportunities.
- The system should manage sales and order information.
- The system should generate reports for sales and customer data.

- **The system should allow users to update and view customer interaction history.**

Brainstorming

2.2 Brainstormed Ideas

- Manual farm records
- Excel-based management
- Web-based system

- Mobile farm app
- Salesforce-based

FMS Selected Idea

Salesforce-based Farm Management System

3.REQUIREMENT ANALYSIS PHASE

Functional Requirements

Functional requirements define what the system should do.

- **The system should allow users to create and manage customer records.**
- **The system should allow tracking of leads and opportunities.**
- **The system should manage sales and order information.**
- **The system should generate reports for sales and customer data.**
- **The system should allow users to update and view customer interaction history.**

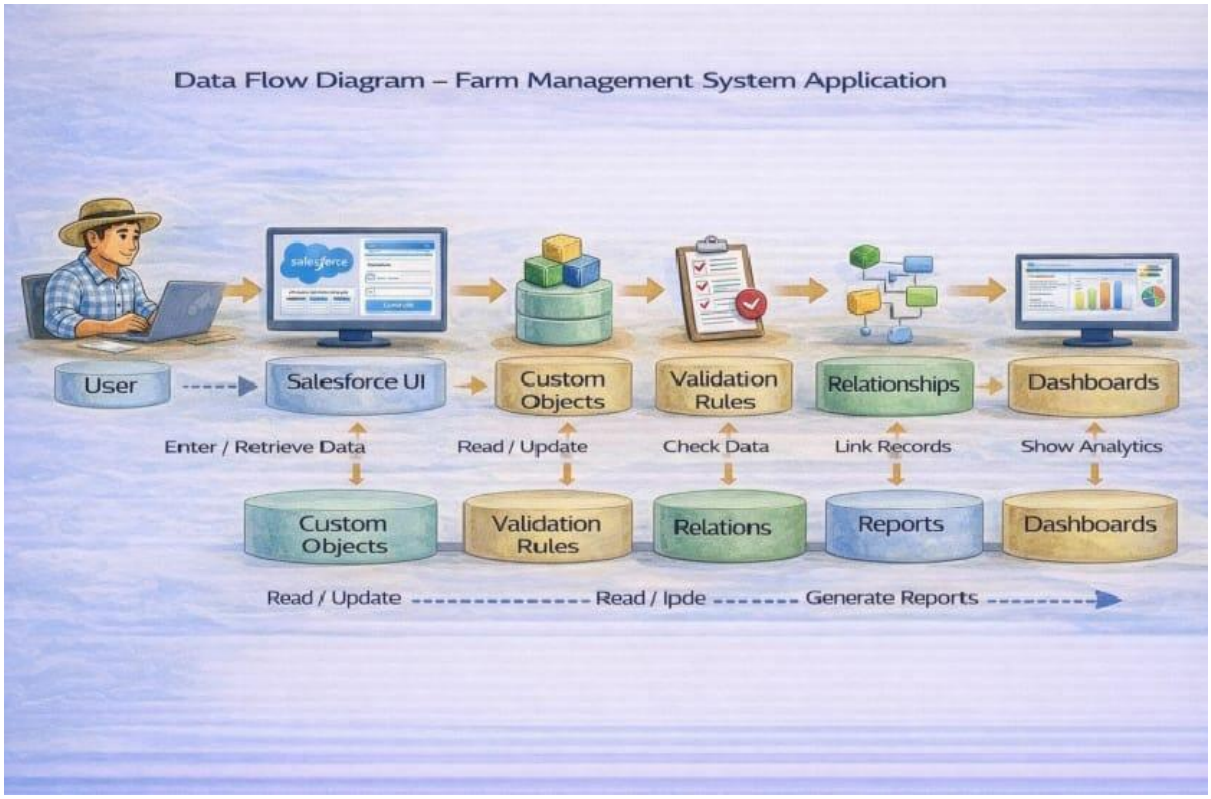
Non-Functional Requirements

Non-functional requirements define how the system should perform.

- **The system should be secure and protect customer data.**
- **The system should be accessible through the cloud.**
- **The system should be reliable and available to users anytime.**
- **The system should support multiple users simultaneously.**

3.2 Solution Requirements 3.3 Data Flow Diagram Data Flow:

User → Salesforce UI → Custom Objects (Farm, Crop, Farmer, Buyer) → Validation Rules → Relationships → Reports → Dashboards



4. PROJECT DESIGN PHASE

The application also reduces manual work, minimizes errors, and increases overall productivity. By automating various business processes, the CRM system allows The Chai Shop & Co to focus more on improving customer satisfaction and expanding their business.

4.3 Solution Architecture

Architecture Layers

1. Presentation Layer – Salesforce Lightning UI
2. Application Layer – Validation Rules, Relationships
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

5. Project Development Phase:

Project Description:

Through the implementation of Salesforce CRM, the project successfully demonstrates how cloud-based technology can improve business operations. The system supports lead tracking, customer data management, sales monitoring, and reporting, which helps the organization make better business decisions and enhance customer service.

What Is Salesforce?

Salesforce is a **cloud-based Customer Relationship Management (CRM) platform** that helps businesses manage customer interactions, sales processes, and service activities. It provides tools for storing customer data, tracking leads, managing sales opportunities, and analyzing business performance.

Salesforce allows organizations to build customized applications using its platform without requiring complex infrastructure. Since it is cloud-based, users can access the system from anywhere using the internet.

Key features of Salesforce include:

- Customer data management
- Lead and opportunity tracking
- Sales automation
- Workflow automation
- Reporting and dashboards

- Application customization using objects and fields

In this project, Salesforce is used to build a CRM application for The Chai Shop & Co to manage customer information, track sales activities, and improve business efficiency.

6)Functional & Performance

Testing They are 5 function in this project

1)Customer Account

2)Employer Account

3)Enterprise Account

4)Reports

5)Dashboard and we have a images for that they are

6)conclution

The **CRM Application for The Chai Shop & Co** developed using Salesforce provides an efficient and organized way to manage customer relationships, sales activities, and business data. The system helps store and maintain customer information in a centralized platform, making it easier for employees to access and update records whenever needed.

THANK YOU ALL
